STANDARD 1/16 DIN BASIC AND ADVANCED CONTROLLERS

- *Complete range including basic and advanced control functions*
- *Relay output, static output for SSR, 4-20 mA and 0-10 V analogue outputs*
- *Models with current transformer input and HBA function*
- *Models with RS485 serial interface for MODBUS-RTU protocol*

TH-T SERIES

The **TH-T** temperature controller series offers a complete range of solutions able to satisfy many varied industrial automation needs, including basic models suitable for more simple and cost-effective applications and advanced models created specifically for the more evolved control and interface systems.

Programming of the temperature controllers is quick and easy as the most frequently-used configurations can be set with few keyboard operations. Models with a RS485 serial interface can send the parameter configuration and receive the controlled values through an industrial PC that can control different units.

Versions with a current transformer input, available as an accessory for measurements reaching 25 or 100 A, can detect even a partial load failure, as for example due to a broken heating element.

The series includes models with opto-isolated relay and transistor outputs to control static relays, as well as models with 4-20 mA or 0-10 V normalised proportional analogue outputs.

DATASENSOR
value through detection

The temperature controllers are easily programmed by the 4 push-buttons and display indicators present on the front panel, or via the RS485 serial interface. Additionally the accessory device, as compact as a car key, copies the same configuration onto different temperature controllers. The 'T' push-button rapidly activates the Auto-Tuning function when the temperature increases and reaches the set value, alongside the continuous Self-Tuning of the PID control parameters.

Double-display panel

Terminal block

Amperometric transformer

Programming device

INDICATORS AND SETTINGS

A	**P** push-button for programming access and confirmation
B	**Down** push-button for value decrease / parameter selection
C	**Up** push-button for value increase / parameter selection
D	**T** push-button for Auto-Tuning and Self-Tuning activation
E	**Out1** LED for main output 1 ON status indication
F	**Out2** LED for auxiliary output 2 ON status indication
G	**SET** LED for programming access indication *(blinking)*
H	**AT-ST** LED Auto-Tuning *(blinking)* and Self-Tuning *(on)*
I	**PV** display for process value indication
J	**SV** display for set value indication *(only TH-TD vers.)*

CONNECTIONS
Note: For correct installation and use Datasensor SpA can guarantee only the data indicated in the instruction manual supplied with the products.
